75 Years

of transformative energy

How was it possible for a nation without natural resources, economically marginalized in its region and founded by immigrants, to transform itself into an innovative, avant-garde developed State?

In ancient times, philosophers ordered nature into four elements: earth, air, fire and water. Long before that, the Torah speaks in its first verse about the creation of Earth just after the sky. It then describes the wind (the divine spirit) that blows on the edge of the abyss, right before light (fire) came about, although it was not until the second day that He created the oceans.

75 Years

of transformative energy

How could a community that started out drying swamps and growing oranges become a world leader in nanotechnology, bionic science and clean energy?

The "Israeli miracle" is due to the fact that the country promotes the production of its own resources as well as land improvement. The starting point for this is the culture, which places great value on preserving its natural sources and not overspending them.
